Broncolor/Elinchrom	Alive Lighting	London	07542 049478

Flash/camera repairs.

Profoto will not allow component-level repairs and insist on full circuit-board replacements. They do not allow independents to work on their equipment. No repairs are available on 7a, 7b, some 8a and most older mono-lights.

Bron and **Elinchrom**, will allow component-level repair through authorised repairers but will not distribute circuit diagrams to independent repairers.

For flash-tube replacements, look at: <https://flashtube-phoxene.com/>

Not available for Strobe lights.

Avoid cheap tubes from China off eBay – they may cause damage to kit.

Generally, manufacturers of studio flash/cameras will hold components for about 10 years after a product has been withdrawn. Some Canon kit (lens motors) become unavailable within a 3-year period.

Repairers are very hard to find for older kit like Strobe, Bowens (pre-2004, as well as recent packs such as Creo), Balcar, Langham, Elinchrom (pre-2004), Broncolor (Grafit or older), and Profoto (10 years old).

Equipment such as Ellis, System 2000, Langham, Goddard, Norman and Multiblitz are deemed un-repairable as the original schematics/circuit diagrams are no longer available. Some repairs can be done in Europe by 3rd-parties such as Bron in the Netherlands, and Hensel in Germany.
